December, 2016

Sold as a whole

The BMW Turbo prototype cars have a 2002tii turbo charged motor and other 2002 components. BMW made 2 of these protos.

\$450

rdaley3@aol.com

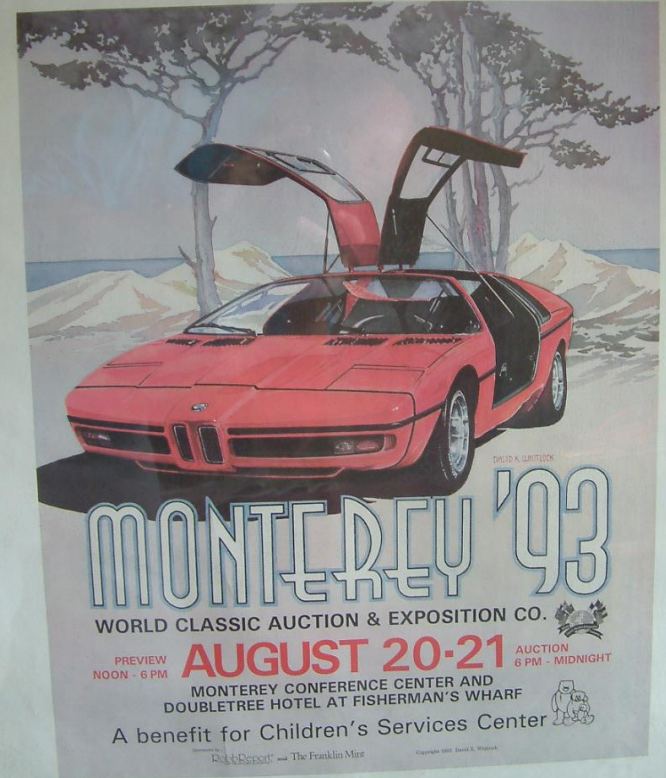

The collection consists of:

- 1 poster
- 1 Automobile quarterly
- 7 diecast cars
- 1 1/32 slot car
- 1 1/18 motorized car

Monterey Poster (11)

This is an original and authentic poster from Monterey CA.

Automobile Quarterly

Automobile Quarterly
is on the BMW Turbo.

Automobile Quarterly

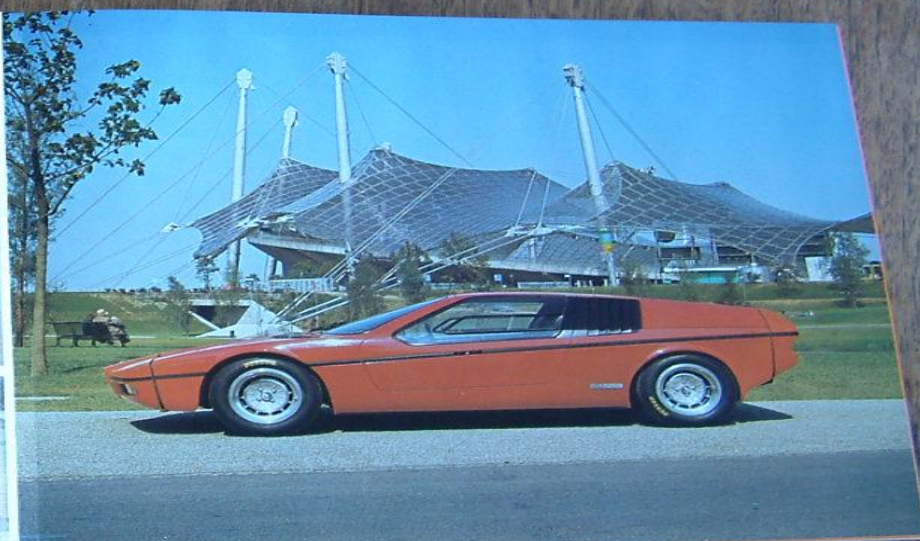

Time. Many mid-engine cars can give you the feeling that you're sitting at the bottom of a well.

[illegible]

As is evident in the photographs, the front end nose ends of the car are separate entities, each with its own impact absorbing structure. Initial or smaller knocks are absorbed by a compressible plastic foam that restores itself to its original shape after contact. For more severe bumps the entire front end is surrounded around a U-beam with a controlled compressibility structure at the rear end by driving lifting units at the front.

Another logical idea: the way they have in the windshields points to the fact when they become a roll cage. The exterior look of the car is its most noticeable feature, of course, having been designed while the direction of Paul Bracq, a Frenchman who joined BMW several years ago. Bracq had spent two years in the design studios of Mercedes during the Fifties and Sixties, but despite what all those other magazines may have told you, he did not design the Wankel-powered 311, he had left Gmünder-Benz by 1967.

We are left with but one disappointment concerning the Turbo, and we meet a state of mind everyone else we know who has seen one of the these cars. BMW can't sell us one.

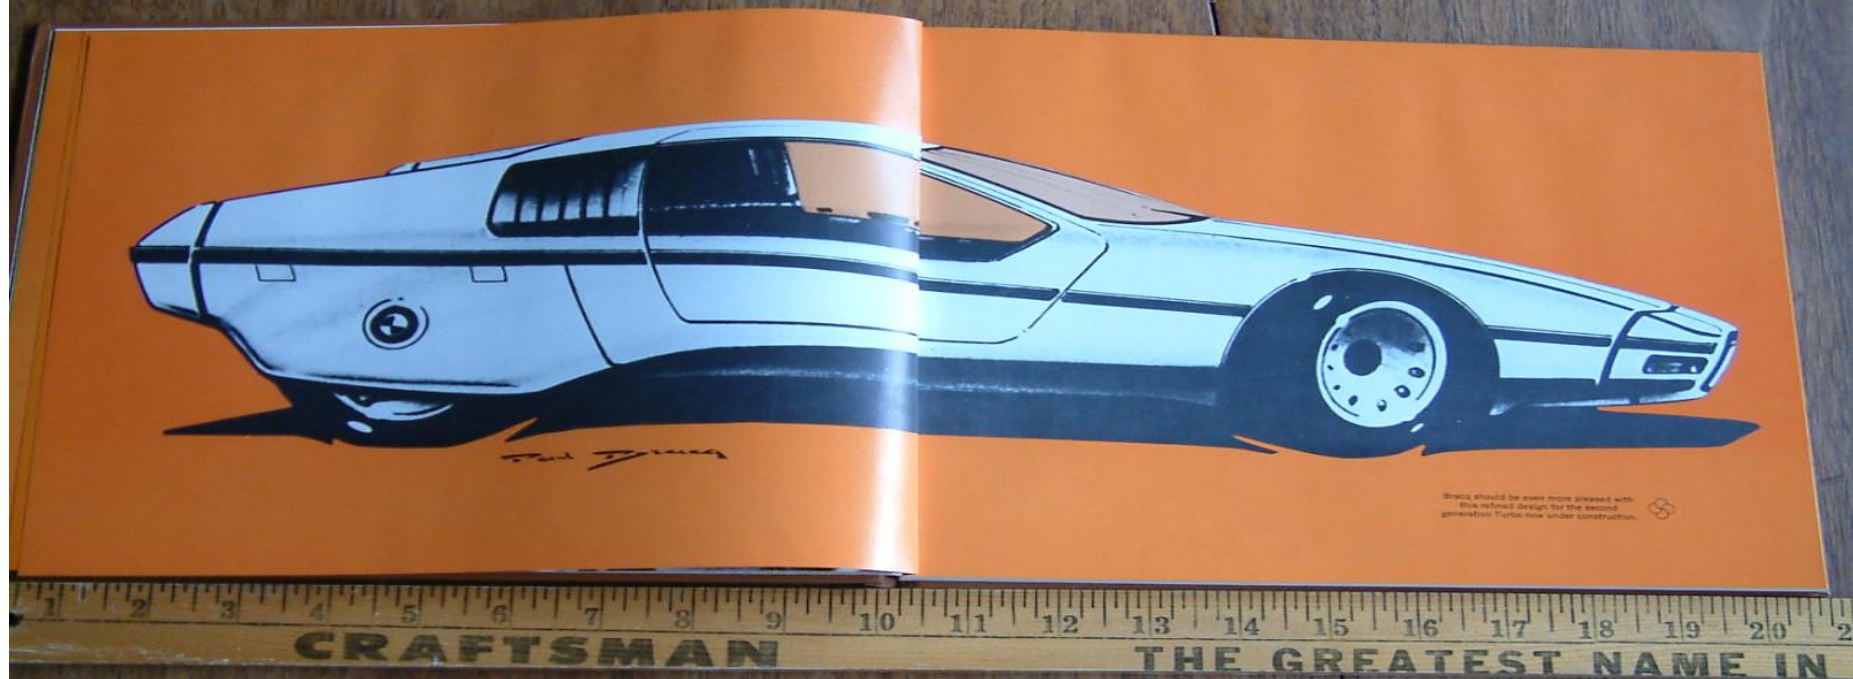

Automobile Quarterly

Notice the 2002 Tii
Motor.

Also the first
appearance of the
bottle cap alloy wheels
that next appeared as
the alloy option on the
late model 2002s and
the 2002 Turbo.
